

Department of Toxic Substances Control

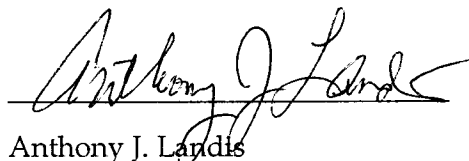

Approval

The polychlorinated biphenyl (PCB) sites that are the subject of this Interim Removal Action Work Plan are limited to those inside of buildings that are within the Eastern Early Transfer Parcel Investigation Areas (IA) B, C1, C2, and C3 that have yet to receive regulatory approval that no further action is necessary, with regard to PCB contamination.

The evaluation and remediation of the sites will be consistent with the final remedy for each IA, as follows:

1. The actions under this Interim Removal Action Work Plan will include evaluation of the feasibility of achieving remediation of PCBs, to the U.S. Environmental Protection Agency residential preliminary remediation goal.
2. If PCBs are left in place above unrestricted use standards, the final remedy for these sites will be evaluated in the final IA Remedial Action Plan.
3. If waste is left in place above unrestricted use standards in the final remedy, a land use covenant and accompanying Land Use Covenant Operations and Maintenance Plan and Agreement will be negotiated and implemented pursuant to the Final IA Remedial Action Plan.

The Interim Removal Action Work Plan for the indoor PCB sites in the Eastern Early Transfer Parcel is hereby approved.

Anthony J. Landis
OMF Branch Chief
California Environmental Protection Agency
